Sample search for articles with Jane Goodall as an author, within the *American Journal of Primatology*. This search can also be done for only an author. The Refine left-hand menu on the Results page has filters (institution, discipline, etc.) to isolate the relevant author in case multiple authors have the same or similar names.

In the results, one can view citations for each article, or for all selected articles.

Reports track all citations for content indexed in the Web of Science universe. (Caveat: WoS is massive, but it’s possible that citations exist in other publications outside of its index.)
Select a linked number to see all of the individual citations.
